What is the Yap Phone?

The Yap Phone allows you to use an actual phone handset to place cost-saving calls over the Internet. Simply install the Net2Phone software and plug the Yap Phone into the USB port on your computer.

What is Yap?

Yap, Your Alternative Phone, is Net2Phone's line of hardware solutions that allows you to easily place low cost Internet phone calls.

Yap delivers big savings by putting your voice over the Internet. Calls are placed from a PC or phone and routed over the Internet by Net2Phone's advanced IP Network. And because the calls bypass much of the traditional phone network, Net2Phone can provide incredibly low rates for the millions of calls it delivers worldwide.
